SUSTAINABLE DEVELOPMENT GOALS

What are the Sustainable Development Goals?

In 2015, under the guidance of the United Nations, the world adopted a set of goals to target many of world's most pressing issues. Referred to as the Sustainable Development Goals (SDGs), these 17 goals and their targets seek to end poverty, protect the planet, and ensure that all people enjoy peace and prosperity by promoting inclusive, equitable, safe, and sustainable societies. The SDGs do not ignore shortcomings—they confront issues, identify root problems, and set objectives to leave no one behind as we transform nations, cities, and neighborhoods into places where we can all live and prosper.

Building Permit Values

Building permit values measures the total value of residential and non-residential permit values.

Type of Graph: Compare Dates: to

Why is this important?

According to Statistics Canada: Building permit data are widely used as a leading indicator for the construction industry since the issuance of a building permit is one of the first steps in the construction process. Statistics on building permits are essential for the computation of residential capital expenditures and inputs for the quarterly and annual estimates of net capital stock and depreciation by component. They are also a major input in the computation of the investment in non-residential building construction on a sub-annual basis. In addition, the results of this survey are used by CMHC (Canada Mortgage and Housing Corporation) as a reference base for conducting a monthly survey of housing starts and completions in accordance with its mandate. The statistics are used by a wide range of economists, construction industry analysts, housing market analysts and economic development officers across Canada.
